

MOBILE FLUSH™

MF30 30 Gallon Mobile Flush unit with battery operated pump & hose option

MF60 60 Gallon Mobile Flush unit with battery operated pump & hose option

Make **Mobile Flush™** part of your Emergency Preparedness Program. **Mobile Flush** is *the* Patent Pending way to safely and sanitarily flush toilets during a scheduled or un-scheduled water shut down. **With the use of Mobile flush, you satisfy the OSHA requirement for hospitals to use *Engineering Control Methods* to protect their employees from exposure to blood & other body fluids.** With all your PPE onboard, *any* employee, with just the push or a button, can very safely and efficiently flush toilets in a patient room or public area, and do it in a way that protects employees/patients/and the public from any kind of direct contact or exposure through aerosolization of liquid or solid waste. **Mobile Flush** not only provides a better methodology, but should **increase your patient satisfaction** and your **HCAHPS** scores during these situations as well as **decrease potential exposure** and injury to employees, patients and the general public and reduce the amount of bio-hazard waste.

FEATURES:

- 30 gallon capacity tank(approx. 18-22 flushes of commercial toilets)
- 60 gallon capacity tank(approx. 36-44 flushes of commercial toilets)
- All Stainless steel construction with 5" polyurethane casters for easy mobility (4 swivel)
- Stainless storage box to hold all PPE supplies (gloves, masks, sanitizer wipes and hand sanitizer dispenser)
- Electric flush valve with automatic one touch timer switch for simple, easy, repeatable operation
- Spray hose attachment with 12 volt 3.5 GPM pump and built in pressure switch (allows for cleaning of bedpans and spraying down of other areas as needed)
- Oval swivel splash shield for easy positioning over entire toilet bowl (completely seals bowl to help eliminate aerosolization)

MOBILE FLUSH™
