

MOBILE FLUSH™

The Mobile Flush Way !

The Wrong Way !

Make **Mobile Flush™** part of your Infection Control / Emergency Preparedness Program. **Mobile Flush** is the safe, sanitary and efficient way to flush toilets during a scheduled or un-scheduled water shut down.

During a planned (hospital construction, water supply maintenance) or unplanned water outage, a hospital is responsible for disposal of human waste in patient room toilets, bedpans and bedside commodes as well as public access toilets. The current CDC recommendation of using a bucket of water from a 55 gallon drum to flush the toilet has some significant drawbacks.

- Pouring a bucket of water into an open toilet full of waste causes aerosolization of that waste which can be splashed or inhaled by the employee and potentially a patient or the general public
- The use of a bucket makes it almost impossible to wash out bedpans, leading to disposal of the bedpan and contents into a bio-hazard bag, special bio-hazard handling and disposal, and all the associated costs.
- Potential employee injury from lifting heavy buckets of water and also the risk of a fall due to splashing water on the floor.

With the use of **Mobile flush**, you satisfy the OSHA requirement for hospitals to use **Engineering Control Methods** to protect their employees from exposure to blood & other body fluids. With all your PPE onboard, *any* employee, with just the push or a button, can very safely and efficiently flush toilets in a patient room or public area, and do it in a way that protects employees/patients/and the public from any kind of direct contact or exposure through aerosolization of liquid or solid waste. **Mobile Flush** not only provides a better methodology, but can **increase your patient satisfaction** and your HCAHPS scores. **Mobile Flush** also **decreases potential exposure** and injury to employees, patients and the general public as well as reducing the amount of bio-hazard waste you have to dispose of.

Contact your Emergency Preparedness Coordinator to inquire about these units being purchased through your ASPR or UASI funding process.
